Dear recruiter,

Currently, I'm looking for a summer internship that allows me to put in practice the theoretical knowledge acquired at college and enrich my professional background. I think months between June and September are good moment to carry it out.

As you can see on my **Curriculum Vitae**, I've a Bachelor's Degree in Computer Engineer but now I'm enrolled in a Bachelor's Degree in Statistics at University of Valladolid, Spain. During the last years I focused my work on Statistical Computation and Data Science. You can know more about my background reading my CV. About my personality, I think I'm a persistent person that always looks favorably to learn new things. I like to work at a quiet area, but I think it's mandatory to work as a team putting ideas in common and notifying about difficulties and troubles.

Finally, if you liked my profile you can contact me via email or something like that to talk about it. If you're going to call preferably let me know before.

Sincerely,

Sergio García Prado.
